

VIJAYAVARMAN ARUNASALAM HARIKRISHNAN

Rochester, NY | vijayavarmanah@gmail.com | [LinkedIn](#) | [Portfolio](#)

EDUCATION

Master of Science in Cybersecurity

Rochester Institute of Technology, Rochester, NY

CGPA – 3.97/4.0

Aug 2023-May 2026 (Expected)

Bachelor of Engineering in Computer Science and Engineering

Meenakshi College of Engineering, Chennai, India

CGPA - 8.3/10.0

Aug 2016-Apr 2020

PROFESSIONAL EXPERIENCE

Rochester Regional Health, Rochester

Identity and Access Management Co-Op

Aug 2025-Present

- Manage IAM service requests via Ivanti, employing PowerShell and Active Directory to execute timely account creation, modification, and unlocks, ensuring prompt resolution of access issues
- Provision and manage privileged user, service, and vendor accounts in CyberArk PAM, configuring safes and access controls to enforce least-privilege principles and support Secure Infrastructure Access (SIA)
- Generate Active Directory reports with Netwrix to identify inactive or misconfigured accounts, supporting access cleanup efforts and early-stage SailPoint identity governance implementation
- Develop PowerShell automation to monitor password-reset events and notify affected users, strengthening account security awareness
- Enhance internal C#-based IAM portal (Entity Framework, Azure DevOps), implementing database updates, resolving defects, and adding features to streamline identity operations without direct Active Directory access

Cognizant Technology Solutions, Chennai

Associate / Analyst / Programmer Analyst Trainee

Nov 2020-Aug 2023

- Built automated API and functional tests using Selenium to improve application reliability
- Developed and executed 50+ test cases per release, resolving critical defects with cross-team collaboration
- Mentored and guided new team members, promoting secure coding practices and robust testing methodologies

SKILLS

- **Languages & Scripting:** Python, PowerShell, C, Java, SQL
- **Platforms & Systems:** Active Directory, Azure AD (Entra ID), Windows Server 2019, Azure Data Explorer (KQL)
- **Tools & Frameworks:** Wazuh, Snort, Wireshark, Nmap, Burp Suite, Metasploit, FTK Imager, NIST CSF, NIST RMF

CERTIFICATIONS

- CompTIA Security+ (SY0-701)
- Fortinet Certified Associate in Cybersecurity
- Fortinet Certified Fundamentals in Cybersecurity
- Google Cybersecurity Professional Certificate

TEACHING EXPERIENCE

Rochester Institute of Technology

Teaching Assistant – Cryptography & Auth

Aug 2024-Dec 2024 | Aug 2025-Dec 2025

- Managed, graded, and provided feedback on Python and Java programming assignments covering cryptographic algorithms (Substitution Cipher, RC4, A5/1, MD5), using GitHub Classroom for submission and evaluation

Rochester Institute of Technology

Teaching Assistant – Introduction to Cybersecurity

Jan 2025-Aug 2025

- Assisted 60+ students with labs and assignments in cybersecurity fundamentals (network security, risk analysis, access control, system security) and graded 25+ assignments per term, providing feedback on compliance, authentication and authorization, and software security

PROJECTS

Legal Compliance Analysis for Breach Remediation

- Analyzed a simulated organizational data breach, mapping security gaps to HIPAA, PCI DSS, GDPR, GLBA, and NYDFS requirements, including potential regulatory impact and fines
- Applied the NIST Cybersecurity Framework (Identify, Protect, Detect, Respond, Recover) to propose detailed remediation actions to close compliance and security control gaps

Attack Defend Exercise: Securing a Corporate Infrastructure

- Built and monitored a multi-service corporate network (AD, DNS, Mail, Web, FTP, NTP) using Wazuh and Snort, analyzing 20K+ security events including thousands of brute-force authentication attempts
- Conducted and responded to controlled attacks including EternalBlue, SQL Injection, and Path Traversal in a multi-team exercise, documenting exploits, detections, and remediation steps

Enhancing Digital Twin Security through Partial Homomorphic Encryption

- Designed a proof-of-concept to demonstrate how partial homomorphic encryption can be applied in a medical digital twin context to enable computation without exposing sensitive physiological data
- Implemented ElGamal-based partial homomorphic encryption in Python to compute cardiac output from encrypted heart data, using a MATLAB heart simulation to generate and visualize test inputs

COMPETITIONS

- **NCAE Cyber Games 2025** – Finished 3rd among the top 12 teams from the East Overflow region
- **CyberSeed 2024 CTF** – Finished 23rd among 160+ teams after completing 87% of challenges
